About The Hershey Company

A century ago, all we had to offer was a simple kiss. Today, we are among the most respected companies in the world, bringing snacks, community growth, and human opportunity to all corners of the globe.

It all started with Milton S. Hershey, founder of The Hershey Company. He was not immediately successful as a businessman but he persevered through several failed attempts to establish a confectionery business before he established the Lancaster Caramel Company. In 1893, after visiting the World's Columbian Exposition, Mr. Hershey became very interested in milk chocolate. Through trial and error, he finally established his own formula for milk chocolate. In 1903, he returned to Derry Church, now known as Hershey, to begin construction of the original chocolate factory located at 19 East Chocolate Avenue. By 1905 the factory was complete and in production. The foundation and history of The Hershey Company are firmly grounded on the innovation and persistence of Milton Hershey.

In addition to establishing a viable and growing business, Milton Hershey also provided a model of social responsibility for other businessmen and his successors to follow. Along with building a factory, Milton Hershey set out to establish a town for his workers that went beyond basic housing to include opportunities for entertainment and recreation. He is credited with building Hershey Park, a swimming pool and a ballroom. Later as the depression took grip on the country, Mr. Hershey started the "Great Building Campaign" to provide jobs. This effort yielded some of the town's most prestigious buildings like The Hotel Hershey, the community center and the stadium and firmly entrenched Hershey as a destination town for tourists.

Along with establishing a town with all of the amenities, Milton and Catherine Hershey founded the Hershey Industrial School in 1909. Unable to have children themselves, they channeled their wealth to the school, established for the care of orphaned boys. In 1918, Mr. Hershey gave his entire fortune of \$60 million dollars to the school. Today the school has expanded to serve both girls and boys. The Milton Hershey School is now home to around 1800 students from disadvantaged situations, providing them with housing, education, medical and dental care, opportunities for recreation and the hope of a future without poverty.

Today THC is over one hundred years old and proudly bears the name of its founder. The company has grown from a single factory in Hershey, Pennsylvania to become the largest producer of chocolate in North America and a global leader in confectionery and sugar. Hershey's presence in the marketplace is significant with over \$7.4 billion in sales and products representing 80 brands that are manufactured by facilities across the United States, Canada, Mexico, Brazil, India, Malaysia and China.

Continuing the legacy of our founder, Milton S. Hershey, our commitment to delivering quality products to our customers and upholding ethical business practices is core to who we are. We strive to make sure all of our decisions — from responsible sourcing of our ingredients and environmental stewardship to fostering diverse work environments and transparency— are guided by our deeply held values.

"Give them quality. That's the best kind of advertising in the world."

- Milton S. Hershey

The Hershey Company views its business partners as an integral part of its success. Our business partners are ingredient and raw materials Suppliers, Co-manufacturers, Co-packers, and Food Licensees - collectively referred to as Suppliers. We respect our supply chain network and strive for the development of a relationship with our Suppliers that will continually improve the product quality and safety that our customers and consumers demand.

The expectations set forth in this manual are a comprehensive set of food safety and quality programs that serve as a solid foundation for our Supplier Quality Management system. The Hershey Company (Hershey) is committed to delivering safe, quality foods. We rely on our Suppliers to embrace these programs and implement a culture that continually pursues improvements in food safety.

This manual does not outline or mandate how to set up or operate a Supplier's facility to meet the expectations set forth by Hershey. Suppliers are solely responsible for operating their facilities in a manner that complies with this manual, Hershey specifications and all-applicable federal, state, and local laws and regulations in both the country of manufacture and country to which any Products provided will be delivered.

The Hershey Company is committed to building and maintaining a mutually beneficial relationship with Suppliers. Suppliers of ingredients or raw materials should send any questions about Hershey or these expectations to HersheyQualitySupplierAssurance@hersheys.com. Co-manufacturers, Co-packers, and Licensees should send any questions about Hershey or these expectations to their Hershey Quality & Regulatory Compliance Representative. We will attempt to provide assistance and guidance on these expectations as requested and welcome comments and suggestions.

1.1 Minimum Standards Overview \ GFSI Certification

The Supplier shall have implemented a written Quality Management System to ensure that the material produced conforms to specified requirements. At a minimum, the Quality Management System shall ensure compliance with each element of this Hershey Company Supplier Quality Expectations Manual, Hershey Specifications for the specific product, and all applicable regulatory requirements of the production country and the destination to which the products will be delivered.

The Hershey Company continues to move toward industry-accepted certifications. It is a requirement for all Suppliers of Hershey to attain a Global Food Safety Initiative (GFSI) certification. This indicates a Supplier's conformity with an industry-recognized baseline for food safety, demonstrates ongoing commitment to food safety and provides for an independent verification of this commitment. GFSI benchmarks each Food Safety Management Scheme and recognizes those that meet key elements. All GFSI recognized Food Safety Management Schemes are accepted by The Hershey Company. (See – <http://www.mygfsi.com/schemes>)

Specific information on the applicable timeline for meeting GFSI requirements is available from your Hershey Business and Quality & Regulatory Compliance (QRC) partners. If your company is not GFSI certified, you will be asked to provide a detailed plan, which outlines specific activities and milestones for achieving GFSI certification.

In addition, the Supplier's Quality Management System shall specifically include controls to ensure all manufacturing facilities producing Identity Preserved Products shall develop and maintain a program for the identification and processing of Identity Preserved Products. Identity Preserved Products claim special attributes and require segregation and proper labeling to prevent comingling with other products and raw materials that do not have the same attributes (e.g., Kosher, Halal, and organic products, genetically modified organisms (GMO), and products with allergens or sensitive ingredients). Suppliers shall assure the declaration of the identity-preserved status of products complies with all applicable federal, state, and local laws and regulations.

Suppliers shall retain a statement of the status claimed by all Identity-Preserved Products, including, but not limited to, finished products, raw materials, ingredients, preservatives, additives, processing aids, and flavorings. Raw material specifications for Identify Preserved Products shall include requirements for their handling, transport, storage, and delivery prior to use. Manufacturers producing Hershey Finished products with specifications for Identity-Preserved Products shall include requirements for their handling, transport, storage, and delivery and any additional customer requirements concerning Identity Preserved Products.

1.2 Brokers/Distributors/Traders

In cases where materials are being procured through brokers, distributors and traders, the following requirements must be followed:

- Only buy from Hershey approved Suppliers (approval is ingredient and site specific). The Supplier Manufacturing Locations shall be disclosed to the Hershey Contracting Representative to assure that materials are only sourced from locations meeting Hershey requirements for quality and food safety.
- Notify the Supplier that the specific material will be delivered to The Hershey Company.
- Ensure the Hershey Company *SQE Manual* is communicated to Supplier and provide evidence to Hershey of agreement to the requirements by the Supplier.
- The broker/distributor/trader has responsibility to ensure that Supplier complies with those requirements
- The broker/distributor/trader shall be required to notify Hershey of any Manufacturing Location changes. New sites and new lines must be approved prior to use
- The broker/distributor/trader must demonstrate that traceability of materials to Manufacturing Location level is maintained.

1.3 Confidentiality

The confidentiality provisions contained in contracts between the Hershey Company and Supplier shall govern the disclosure of sensitive information shared between the companies. All personnel should avoid sharing confidential or otherwise sensitive information unless such a contract is in place between the companies.

Auditors (Hershey or acting on behalf of the Hershey Company) shall not be asked or required to sign confidentiality agreements as a prerequisite to gaining access for audits prior to or at any time during a quality audit. Auditors verifying compliance to The Hershey Company Supplier Quality Expectation requirements will not audit or inspect financial data, sales data (other than that directly related to The Hershey Company), or pricing data. Auditors will not inspect personnel data, other than data relating to qualifications or training of technical and professional personnel performing functions pertinent to the audit.

1.4 Notifying The Hershey Company of Significant Events

Communication in the supply chain is critical when events occur that could affect food safety, quality, or processing. The Supplier must establish procedures to ensure Hershey is immediately and adequately notified of these occurrences.

The Supplier must notify Hershey by a phone call with a live person **and** by email. A voicemail, even coupled with an email, is not adequate. The Hershey Contracting Representative shall be the primary contact for any interaction or notification required by this document.

The Supplier shall notify The Hershey Company Contracting Representative immediately of any of the following occurrences. This list is not inclusive:

- Systematic product quality defect or process control deviation on raw materials, ingredients or finished products supplied to Hershey.
- Discovery of potentially defective or adulterated ingredients or raw material associated with product in distribution.
- Inadvertent release from Hold of any material produced for The Hershey Company.
- Routine and non-routine Regulatory Authority investigations, testing, sampling, reporting, or other contact or action with the potential to affect material produced for Hershey.
- Any event that leads the Supplier to suspect that a non-conformance (specification, Regulatory, etc.) exists in product already shipped to The Hershey Company.
- Product tampering or threat of tampering.
- Event or substance that could threaten ingredient or product integrity.
- Notification by law enforcement or other authority of a potential product safety event.
- Identification of an unlabeled allergen in material produced for Hershey.
- Any change to a Supplier's processes, facilities and/or sourcing of ingredients that could have an impact on materials supplied to Hershey.
- Manufacturing changes: The Supplier must notify Hershey of its intention to make any change that may

affect the safety, quality, security, shelf-life, ingredient statement, allergen profile, nutritional labeling or functionality of material produced for Hershey – such as changes in material formula, raw materials, production line, Manufacturing Location or processes – and any change shall be approved by Hershey before being implemented. The Hershey Company must be notified of such changes in writing.

- Inability to deliver materials that meet Hershey Specifications
- If any of the Supplier sites manufacturing products for Hershey loses GFSI certification.

2 LEADERSHIP AND COMMITMENT

Suppliers shall cultivate a strong food safety and quality culture across all levels and functions of the organization. Establishing and building a culture begins at the top of the organization where leaders have the responsibility to set the food safety vision for the organization. When leaders demonstrate a commitment to food safety and quality through their decisions and behaviors, the rest of the organization can follow. Everyone in the organization needs to understand his or her role in upholding food safety and quality.

2.1 Commitment

Policy Statement

Suppliers shall develop and maintain a policy statement that includes, but is not limited to, the following:

- Commitment to supply safe, quality food products
- Methods used to comply with customer and regulatory requirements
- Commitment and methods used to continually improve its food safety and quality management system
- Commitment to establish and review food safety and quality objectives
- Commitment to maintain an effective GFSI certified food safety and quality management system

This policy statement shall be:

- Signed and dated by senior management
- Made available in language(s) understood by all employees
- Displayed and communicated to all employees

2.2 Organization and Resourcing

Suppliers shall maintain an organizational structure that identifies employees with responsibility for food safety and quality and describes their interrelationship. This organizational structure shall be dated, reviewed and updated periodically, and communicated within the organization. Suppliers shall provide adequate resources for the implementation and effective management of their Quality Management System.

2.3 Roles and Responsibilities

2.3.1 Food Safety & Quality Responsibilities

Suppliers shall identify employees with responsibility for food safety, quality and regulatory, define their duties, and communicate their interrelationship in the organization. Suppliers shall inform employees of their responsibility to report food safety and quality problems to management.

2.3.2 Training

Suppliers shall define and document the responsibility for establishing and implementing the training needs of the organization's employees to assure they have the required competencies to carry out those functions affecting product legality, safety, and quality.

2.4 Communication

Communication between The Hershey Company and its Suppliers is an essential element of a thriving and respectful partnership. The routine exchange of information provides the best opportunity to effectively plan and implement food safety and quality initiatives.

3 AUDITS

The Hershey Company shall perform an initial food safety assessment of Suppliers as part of the Supplier approval process. Additional audits may be conducted based upon Supplier performance, risk assessment, and other factors determined by Hershey. Suppliers should complete corrective actions in a timely manner.

3.1 Audit/Inspection Requirements

All Suppliers of The Hershey Company must be assessed and approved prior to the production and shipment of any materials. The frequency and type of approval audit required by Hershey is dependent on the type of material or product supplied and may be conducted by:

- Second Party Auditing Supplier on behalf of Hershey or
- a Hershey employee

Suppliers must permit The Hershey Company or its representatives to enter and audit any establishment manufacturing, storing or supplying materials for Hershey. The audit requirements are prioritized based upon the experience with the Supplier and the type of material produced for Hershey at that Location. To become and remain an approved Supplier, the audit findings must be acceptable to Hershey. These food safety and quality assessments evaluate key food safety programs and manufacturing controls, which may include, but are not limited to HACCP validations and verifications of Critical Control Points, Allergen controls and Pathogen Environmental Monitoring.

3.2 Internal Audits

The Supplier shall establish and maintain written procedures for conducting internal audits to verify whether their Quality Management System and food safety programs, including the relevant content of this SQE Manual, are adequately implemented. Supplier's management shall review audit results, corrective actions and follow-up as part of regular meetings. Suppliers shall train all employees conducting internal audits on internal audit procedures.

3.3 Corrective and Preventive Action (CAPA)

Suppliers shall develop and maintain a corrective actions program to describe methods for investigation, resolution, management, and control of corrections and corrective actions. This program shall include the identification of the cause and resolution of noncompliance of critical food safety and quality parameters. Suppliers shall document all investigations and resolutions of corrections and corrective actions.

All programs mandated by this *SQE Manual* require that Corrective and Preventive Actions be taken in the event of non-conformances. The Supplier shall have an effective CAPA program tracking such actions to ensure that non-conformances in any program are addressed in an appropriate and timely manner.

Corrective Action Preventative Actions (CAPAs)

Hershey will communicate food safety, quality, and service issues and resolutions in a real-time basis. Suppliers shall acknowledge CAPAs in a timely manner, providing a complete response with actions that resolve the issue. Each CAPA includes expected response times.

The effectiveness of the corrective action shall be verified and additional actions must be implemented where necessary. The audit must be completed and closed- out within an established timeframe.

4 INCIDENT MANAGEMENT

4.1 **Hold & Release** (this section applies where appropriate to the materials being provided or as specified by Hershey)

The Supplier shall have a written Hold and Release control program that clearly establishes roles and responsibilities for effective implementation. The Hold and Release program shall apply to product on the Supplier's premises or other facilities used by the Supplier. Materials that are on Hold must be controlled by a defined and effective system, which is intended to prevent inadvertent movement. Inventory reconciliation must occur to verify proper control.

The program shall include controls for non-conforming raw materials, materials pending testing (e.g., pathogen testing, sterility testing or Certificate of Analysis (COA) verification), packaging, labels, semi-finished product (work-in-progress), finished product, and rework. The Supplier must maintain records sufficient to enable reconstruction of each hold event (e.g., quantities, code dates, lot numbers, product numbers, reasons for hold and/or release, investigative information, disposition, and traceability information).

If any material produced for Hershey is either inadvertently released from hold or is suspected of non-conformance but has already been shipped to The Hershey Company, the Hershey Contracting Representative shall be immediately notified (see Section 1.4 - Notifying The Hershey Company of Significant Events)

Prior to release, evidence shall be documented to demonstrate one of the following:

- Evidence that control measures have been effective beyond the monitoring system (i.e. analytical or microbiological testing results)
- The control measures (i.e. CCP) comply with the performance intended of that product (CCP charts, retest data, evidence of rework)
- The results of sampling, analysis and/or other verification activities demonstrate that the product complies with the identified acceptable levels for the food safety hazard(s) concerned

4.2 Control and Disposition of Non-Conforming Products

Supplier Noncompliance

Suppliers shall develop and maintain a documented Supplier noncompliance program to communicate and track noncompliance issues with their Suppliers. The program shall require corrective action responses from identified Suppliers addressing the nonconformance issues.

Disposition of materials on Hold that do not comply with specific approved Hershey Specifications must be effectively controlled and documented. The Supplier shall have written procedures for the identification, documentation, evaluation, segregation (where practical) and determination and execution of the final disposition of non-conforming products.

Rejected material shall be clearly identified. The reason for rejection of the material, code dates, quantities involved and its disposition shall be noted on the batch/lot record. Records of actions and outcomes shall be maintained (for example, certificates or other evidence of product destruction or burial). Disposition shall be completed in a timely manner.

4.3 Regulatory Actions\Product Retrieval\Recall\Withdrawal

Suppliers shall notify The Hershey Company immediately of regulatory actions or product retrievals involving materials manufactured for Hershey. If finished products manufactured for Hershey are sampled under regulatory action or retrieval, Suppliers shall immediately place those products on hold and take duplicate samples. Suppliers shall not release these materials without Hershey approval. Samples shall remain at the Supplier's facility until a disposition is provided by Hershey.

Suppliers shall develop and maintain a documented recall and withdrawal program that includes written retrieval procedures to promptly and effectively respond to product issues. Suppliers shall maintain documentation and records of all recalls and withdrawals. Suppliers shall investigate all recalls and withdrawals to determine the cause. Suppliers shall document and communicate to Hershey all actions taken because of the investigation.

The retrieval system shall be tested on an annual basis and after any major system changes to confirm (1) the accuracy of all product and contact data and (2) the continuing effectiveness of procedures and traceability systems. The results of these tests and any corrective actions necessary shall be documented.

5.1 FOOD SAFETY AND QUALITY POLICIES AND PROCEDURES

Suppliers shall develop and maintain specific programs as part of an overall Quality Management System to assure the materials provided:

- Meet all specifications, standards, and requirements established by The Hershey Company
- Conform to all applicable federal, state, and local laws and regulations and industry standards
- Are free from any physical, chemical, or biological hazards

At a minimum, Suppliers' food safety and Quality Management System shall comply with GFSI standards and include:

- Food supply chain security
- GMPs
- SSOPs
- HACCP
- Environmental monitoring procedures (EMP)
- Allergen and sensitive ingredient control
- Pest elimination
- Foreign material prevention and control
- Receiving and inventory management
- Product and process evaluation
- Product traceability and mock recalls
- Packaging and labeling
- Storage and shipping
- Analytic records and laboratory support
- Employee training

The Hershey Company shall evaluate Suppliers' processes and products on a regular basis. The Hershey Company reserves the right to conduct site visits as a part of our evaluation, with the goal of continual improvement.

Suppliers shall outline how they control potential hazards and assure food safety, including, but not limited to:

- The results of a hazard analysis conducted to identify food safety hazards in raw materials, packaging materials, and the process
- Process controls at control points in production to monitor food safety and identify when a process is deviating from set parameters

5.2 HACCP

Suppliers shall develop and maintain a HACCP plan to identify and control hazards associated with the material and/or process. Suppliers shall provide the HACCP flow chart for each product or process to The Hershey Company. Suppliers may provide a copy of the HACCP plan and at a minimum, allow Hershey to view the plan at the Supplier's facility. Led by a trained individual, Supplier HACCP Teams shall develop, monitor, review, and validate the HACCP plan.

For products and processes with no CCPs, Suppliers shall perform a hazard analysis and maintain a flow chart, the hazard analysis, and supporting documentation to justify the decision not to have a CCP. Suppliers shall review the hazard analysis, supporting documentation and flow chart at least annually or when the process, product, equipment, and/or other food safety related areas are changed. Suppliers shall perform verification and validation of all prerequisite programs used to justify decisions in the hazard analysis to support the absence of CCPs.

5.2.1 Monitoring

Suppliers shall monitor critical limits for each CCP at a frequency defined in the HACCP plan to assure implementation of and compliance with the program. Employees responsible for monitoring activities shall sign and date each monitoring record. A master sheet may be used to clearly align signatures to employees' names and titles. Suppliers shall maintain legible, thorough monitoring records. Suppliers shall assure measuring instruments used to monitor CCPs, if any, are appropriate for and capable of measuring the critical limit(s) and are to be calibrated.

5.2.2 Verification

Suppliers shall establish methods, identify responsible employees, and develop criteria for verifying the effectiveness of monitoring activities to assure they achieve their intended purpose. The HACCP plan shall describe who performs verification activities, how the activities are performed, and how often the activities are performed.

5.2.3 Validation

Suppliers shall establish methods, identify responsible employees, and develop criteria for validating prerequisite programs, critical limits, and other food safety limits to assure they achieve their intended purpose. Suppliers shall document all validation activities.

5.2.4 Review and Reassessment

Suppliers shall review the HACCP plan at least annually and when the process, product, equipment, and/or other food safety related areas are changed. Suppliers shall document the review process and maintain records of reviews and the review process (e.g., meeting minutes, records of changes).

5.2.5 Documentation

At a minimum, Suppliers shall:

- Maintain a current, signed copy of the HACCP plan
- Assure the plant manager or plant authority signs the HACCP plan upon creation and with each change
- Develop a HACCP plan for each type of product or process
- Include a plant layout showing product flow in the HACCP plan
- Assure a current flow chart, identifying CCPs, is available upon request
- Summarize CCPs, if any, in the HACCP plan with critical limit(s), monitoring activities, corrective actions, and verification activities; include documentation of process capability to demonstrate the critical limit(s) is compatible with plant process capabilities
- Assure management maintains control of the product and process when deviations occur
- Document all deviations and corrective actions to demonstrate control of the affected product
- Maintain a deviation log
- Document the justification for monitoring and verification frequency in the HACCP plan
- Document verification and validation of prerequisite programs listed in the HACCP plan

5.3 Thermal Processing (Treated/Pasteurization Process)

Suppliers providing thermally processed foods shall comply with all applicable federal, state, and local laws and regulations. Suppliers shall develop and maintain documented programs to assure the products have a minimum 3-log reduction of Salmonella. Suppliers shall maintain all production and processing records.

The Supplier having expert knowledge of thermal processing shall validate the thermal processes. Suppliers should have appropriate facilities and equipment for collecting heat penetration data. Suppliers shall process products based on thermal processes established by the thermal mapping. Suppliers shall conduct frequent checks of critical factors to assure they are within the limits specified in the scheduled process. The defined process shall include, but are not limited to, the following:

5.3.1 Process Deviations

The Supplier shall review records of all thermal process deviations and disposition them using established scientific methods. If Hershey branded product was made, the Supplier shall review the recommendations with The Hershey Company for final disposition of the product.

5.3.2 Record Review

Suppliers shall conduct record review no later than the next working day after processing. Record review shall include, but is not limited to, the review and verification of all relevant production and processing records, tests, and

inspections to assure only safe and stable product is shipped into commerce.

5.3.3 Product validation

Suppliers shall conduct validation studies following installation of new lines and development of and/or changes to a process, package, or product as deemed necessary by Hershey. Suppliers may use a qualified third-party facility (e.g., universities, outside laboratories) to conduct these incubation studies.

5.3.4 Post Processing

Suppliers shall develop and maintain a documented post processing operation program. The program shall include procedures to protect against post process contamination.

5.4 Prerequisite Programs/Preventative Controls

Suppliers shall establish and maintain prerequisite programs, preventive controls, and corrective action procedures, including, but not limited to, the monitoring of corrective actions taken, to support the HACCP program.

5.4.1 Employee Practices

Suppliers shall develop and maintain documented GMP programs that control conditions to protect and maintain food safety and quality. These GMPs include, but are not limited to, the following:

- Employee training
- Product and material receiving, handling, and storage
- Employee hygiene and hygienic practices
- Control of employee illness and communicable disease
- Facility and equipment condition
- Facility structure and grounds

These GMP programs shall comply with the Codex Alimentarius Commission's recommendations on general principles of food hygiene, where applicable.

Employees shall wash hands before beginning operations and after each absence or activity where hands are potentially soiled (e.g., using the restroom, handkerchief/facial tissue use, handling dirty material, smoking, eating, and drinking). If gloves are used, employees shall maintain hand-washing practices. Employees directly handling product or product contact surfaces should clean and sanitize their hands after touching any non-food contact surface and prior to donning gloves.

- Clothing

Clothing worn by employees should not present a contamination risk to the product. Employees shall wear clean clothing at the start of the shift. Employees shall change soiled clothing if it presents a product contamination risk. If shirts or smocks have pockets above the waist (or lower if exposed product is below the waist), Suppliers should assure pockets are sewn shut or enforce a policy that prohibits storing items in those pockets.

Employees shall change disposable gloves and aprons after each break, upon re-entry, and when damaged. Employees shall store non-disposable gloves and aprons under conditions that will not result in contamination when not in use.

- Visitors

Visitors shall wear suitable clothing and footwear when entering any food processing or handling area. Visitors shall enter and exit food processing and handling areas through proper staff entrance and exit points and shall comply with all hand washing and personal hygiene requirements. Suppliers should have documented GMP requirements for visitors.

5.4.2 Employee Training

Suppliers shall develop and maintain a documented employee training program to assure regular training on food

safety and quality. Suppliers shall determine the necessary competence for employees performing work affecting food safety, food defense, and product quality across all functions that encounter materials and finished product. Suppliers shall train new and temporary employees before they begin working in production. The training program shall include refresher training.

5.4.3 Allergen Control Program

The Supplier shall have an effective program to evaluate, identify, and control food allergens to ensure that specific allergens are not inadvertently incorporated as an undeclared component of any product. The information provided by the Supplier should allow for an unambiguous determination of the need for allergen declaration in The Hershey Company product.

An Allergen Assessment shall be carried out as part of HACCP Plan development to identify, review, and document allergens likely to be present. The Allergen Assessment shall consider possible sources of allergens related to the formulation, process, and site-specific practices, including: raw materials/ingredients, processing aids, rework addition and potential for cross contact in manufacturing, storage or shipment practices. The program shall also identify potential avenues for cross-contamination, including, but not limited to rework, trimming, reprocessing and equipment cross contact.

The Allergen Assessment must consider all allergens on The Hershey Company Allergen Category List as well as any others identified in local regulations and regulations of the countries to which the product is shipped.

- Egg and egg products
- Milk Products (Whey, Casein, Butter, Dairy)
- Wheat and wheat products
- Non-wheat gluten-containing ingredients, such as rye, barley and their derivatives
- Soy lecithin*
- Soy protein*
- Peanuts*
- Tree Nuts* (almonds, Brazil nuts, cashews, chestnuts, coconut, hazelnuts [filberts], macadamias, pecans, pine nuts, pistachios, shea nuts, walnuts)
- Other nuts (beech nuts, butternut, chinquapin, ginkgo nuts, hickory nuts, lychee nuts, pili nuts)
- Crustacean/shellfish (Shrimp, Lobster, etc.)
- Mollusk (Clams, mussels, scallops)
- Fish
- Sesame seeds
- Mustard
- Celery root, stalk and leaves (not Seeds)
- Lupine
- Sulfites if greater than 10 ppm

*The Hershey Company considers the refined, bleached, and deodorized oils derived from these foods non-allergenic.

Where possible, allergens must be “designed out” of the product, making labeling unnecessary. This may be achieved by reformulation or by avoiding manufacturing cross-contact (via proper rework handling, product sequencing, changeover cleaning or change-over flushing). Avoiding the introduction of allergens through cross-contact from other lines (no common equipment) or other production areas shall be strictly managed through raw material handling (e.g., use of color coded utensils and work tools), rework handling, GMP and employee allergen awareness training. Allergen-containing materials shall be stored in a manner that will prevent cross-contact. Rework product containing allergens as an ingredient shall be used only in products, which contain the same allergen as an ingredient.

Controls shall be in place to make sure that The Hershey Company is notified of all allergens present (as ingredients or traces). Where a new allergen is identified in a product where it was not previously present, and is therefore not labeled (e.g., discovery of an allergen cross-contact or change to the allergen profile of a raw material), The Hershey Company must be notified immediately (see *Section 1.4- Notifying The Hershey Company of Significant Events*).

Allergen training must be provided so that all involved personnel are equipped with essential information and skills relative to their job responsibilities and the site allergen risk profile. This includes identifying ingredients and products

that contain allergens, knowing the process steps where allergens could be introduced to the product inadvertently and understanding the control methods applied.

5.4.4 Physical Contamination Control

The Supplier shall perform a risk assessment to determine potential sources of extraneous matter. Suppliers shall develop and maintain programs for foreign material prevention and control. The program shall describe maintenance, set-up, verification, and frequency of testing for all foreign material prevention and/or detection devices used by the Supplier. The program shall include guidelines for the prevention of contamination and disposition of materials with suspected or known contamination. Suppliers shall maintain documentation of foreign material findings with root cause and corrective actions.

Suppliers shall develop and maintain a program to control glass and hard/brittle plastic. The program shall identify equipment and other areas containing glass and hard/brittle plastic. The program should restrict the use of glass and hard/brittle plastic devices and supplies. Facilities packing materials in glass shall properly clean the containers and provide shielding to protect materials and ingredients in the event of glass or hard/brittle plastic breakage during production.

All materials manufactured for The Hershey Company shall undergo a foreign material prevention and/or detection step appropriate for the process and material in question (e.g., x-ray, metal detectors, filters, screens). Sensitivity (e.g., detection limits, screen sizes, magnet strength) of the foreign material prevention and/or detection step shall be appropriate for the process and material in question. Suppliers shall optimize the degree of detection, prevention, and mitigation based on the best available technology for the specific application.

5.4.4.1 Metal Detection Requirements

The detection limit for an end-point metal detector will depend on type of product, package, and the detection equipment. Detection equipment settings shall be determined and applied to achieve the most sensitive level possible to provide maximum protection from metal contamination. "Finished product" (unpackaged or packaged) metal detectors shall be installed to provide the greatest probability of consistently detecting the smallest ferrous, non-ferrous and 316 series stainless steel metal contaminants which could be hazardous to the health of a consumer. Typical installations shall achieve minimum sensitivity standards for consistent detection and rejection of the following test pieces:

- 0.8 mm ferrous
- 1.0 mm non-ferrous
- 1.2 mm 316 series, non-magnetic stainless steel

5.4.5 Equipment Calibration

Suppliers shall develop and maintain a documented calibration program to evaluate the performance of operational measuring devices (e.g., metal detectors, thermometers). The program shall include documentation of corrective actions to address the use of a non-calibrated or inaccurate measuring device.

5.4.6 Cleaning and Sanitation

The Supplier shall have implemented a written Sanitation program that ensures cleanliness of the food production environment, equipment (including tankers inbound and outbound) and tools. The program shall address:

- Master sanitation schedules, procedures, methods, and frequencies.
- Correct use of appropriate sanitation equipment and tools
- Equipment disassembly and re-assembly
- Use of food grade cleaning, sanitizing, and disinfecting products
- Chemicals to be used and how they are to be used including chemical concentrations, contact time, temperatures, frequencies, and rinsing procedures
- Verification of Sanitation effectiveness
- Hygiene (non-pathogen) monitoring programs

- Inspection procedures
- Recordkeeping, record review, and corrective action plans

5.4.6.1 Assurance of Sanitation Effectiveness

Suppliers shall perform and document visual inspections to assure cleaning effectiveness. Suppliers shall also verify cleaning effectiveness (e.g., bioluminescence monitoring or swabbing of food contact surfaces at the end of the cleaning cycle, but before sanitizing) and document or record the results. The program shall address recleaning and documentation of corrective actions when deviations occur. Suppliers shall assure food processing areas, food contact surfaces, equipment, and employees' sanitary facilities are clean before production.

5.4.6.2 Traffic Controls

Suppliers shall mitigate risks posed by employee's movement (e.g., on foot, forklifts, hand jacks) between Ready-To-Eat (RTE), Non RTE, and common areas, where applicable. Suppliers providing microbiologically sensitive materials to The Hershey Company shall maintain foot sanitizing stations (e.g., footbath, foaming) and hand washing and sanitizing stations. Suppliers shall develop and maintain an employee and product flow chart as part of their traffic control program.

5.4.6.3 Hygienic Restoration

Suppliers shall develop and maintain a documented program to address hygienic restoration, defined as corrective actions to maintain the hygienic condition of the processing environment and to assure the production of safe, wholesome foods after an event that could compromise food safety (e.g., roof or overhead leaks).

This program shall address immediate and long-term actions required to determine potential product impact and prevent potential contamination of the processing area.

Suppliers shall place any product that could have been contaminated by an event that could compromise food safety on hold. Suppliers shall perform environmental monitoring of the area during hygienic restoration. Suppliers shall notify The Hershey Company if any products manufactured for The Hershey Company are involved in this type of incident.

5.4.6.4 Environmental Microbiological Monitoring Program (EMMP)

Suppliers that manufacture or handle microbiologically sensitive materials for The Hershey Company shall have implemented an Environmental Microbiological Monitoring Program (EMMP). The EMMP program shall verify that the controls put in place during the *Hygienic Zoning* assessment are effective at preventing potential cross-contamination between different Hygienic Zones. The rigor of the plant program depends on the product and process risk evaluation, and the likelihood of pathogen(s) to survive or grow in the finished products during storage and distribution.

5.4.7 Chemical Control Program

Suppliers shall develop and maintain a chemical approval and control program to assure the safe use and storage of chemicals, including those used in the pest elimination program. The program shall assure only approved food grade chemicals are used in food and food contact packaging material production.

Suppliers shall lubricate equipment located over product or product conveyors with food grade lubricants. Suppliers shall use non-toxic paint in food handling areas and only on non-food contact surfaces. Suppliers shall maintain physical separation of food grade and non-food grade lubricants in storage areas and cabinets to prevent potential contamination. Suppliers shall clearly label grease guns for food grade or non-food grade lubricants.

Suppliers shall provide Safety Data Sheets (SDS) for all materials provided to The Hershey Company upon request. If an SDS is not appropriate for the material provided to Hershey, Suppliers shall provide a letter explaining the regulatory rationale used to determine that an SDS is not required.

5.4.8 Integrated Pest Management

The Supplier shall have implemented a written pest management program to monitor and control pest activity in the facility and the surrounding area effectively. If pesticides are used, the Supplier shall ensure that they are used in accordance with local regulations and those pesticides residues do not exceed limits established by the law of both the Location of the facility and the Location where Hershey will receive the material. The Supplier shall ensure that appropriate measures are taken to prevent pesticides from contaminating food products.

Licensed Pest Control Operators (PCOs) or trained employees shall document each inspection and address deficiencies with corrective actions. Suppliers shall document deficiencies and all corrective actions.

Suppliers should train all employees to increase awareness of the pest elimination program and actions that should be taken if employees are exposed to elements of the pest elimination program (e.g., bait stations, traps, pesticide application).

5.4.9 Food Defense / Food Fraud

Suppliers shall establish and maintain a documented food defense and food fraud prevention program that specifies measures implemented to identify the food defense and food fraud vulnerabilities, mitigation strategies and their management.

5.4.9.1 Food defense and food fraud prevention plan

The site's food defense plan shall include methods, responsibility and criteria for preventing food adulteration caused by a deliberate act of sabotage or terrorist-like incident, it shall also include measures to secure incoming ingredients. The site's food fraud prevention plan shall include the methods, responsibility and criteria for identifying the site's vulnerability to food fraud. The food fraud vulnerability assessment shall include the site's susceptibility to product substitution, mislabeling, dilution and counterfeiting which may adversely impact food safety.

5.4.9.2 Food Supply Chain Security

The Hershey Company (Hershey) is a Tier III validated organization voluntarily participating in the Customs-Trade Partnership against Terrorism (C-TPAT) Program. C-TPAT is a voluntary public-private sector partnership program which recognizes that CBP can provide the highest level of cargo security only through close cooperation with the principle stakeholders of the international supply chain such as importers, carriers, consolidators, licensed customs brokers, and manufacturers. Hershey realizes many benefits resulting from our Tier III status, the highest awarded by CBP. It is important that applicable business partners follow C-TPAT's security standards for us to maintain our Tier III status.

Hershey and its business partners are committed to work with CBP to protect the supply chain, identify security gaps, and implement specific security measures and best practices, based on risk, while addressing a broad range of security topics and present security profiles that list action plans to align security throughout the supply chain. Business partners involved with Hershey's international cargo flows shall commit to meet the minimum requirements for compliance with the C-TPAT program. A description of The Hershey Company C-TPAT program is attached in Appendix B.

5.4.10 Facilities

5.4.10.1 Plant Structure

The Manufacturing Location shall be of adequate design and construction to ensure production of safe and high-quality materials. The facility, including utility fixtures, shall be designed to prevent potential contamination sources from affecting materials manufactured for supply to the Hershey Company. The plant structure shall provide adequate physical separation to prevent any cross contamination (e.g. raw and processed, allergen and non-allergen). Facility grounds must be maintained to address food defense considerations. The Location and design of waste bins, toilets and hand washing, drying and sanitizing facilities shall be adequate to comply with GMPs. The Supplier shall ensure that the facility is satisfactorily maintained.

5.4.10.2 Maintenance

Suppliers shall develop and maintain a program to assure maintenance is performed in a manner that minimizes the risk of product, packaging, or equipment contamination. The program shall include, but is not limited to, preventive maintenance, installation, and repairs. Suppliers should maintain a preventive maintenance schedule to cover building, equipment, and premises critical to food safety and quality. Maintenance employees shall inform management if repairs and/or maintenance poses a potential threat to product safety.

If duct tape or plastic is used as a temporary repair pending permanent repair, Suppliers maintain the temporary repair in a sanitary condition. Under no circumstances may temporary repairs be used long term. Management shall respond appropriately to protect product, which may include performing repairs outside processing times.

Suppliers shall provide dedicated maintenance tools for use in the RTE area, where and when appropriate. All contractors and Suppliers shall meet the requirements of the GMP program while working on the premises.

5.4.10.3 Utilities Management

The Supplier shall have implemented programs to ensure safe provision of Utility Services in food production areas. Utility Services include environmental air, compressed air, water, steam, and centralized hydraulic systems. Suppliers shall develop and maintain effective programs for the management and control of the utilities including utilities corrective action standards. All utilities testing standards shall be set for applicable areas based off a risk assessment. The environmental/compressed air, steam, and water shall be monitored on a periodic basis. Applicable corrective action limits shall be defined and followed for all out of specification test results. Recordkeeping and record review shall be in place for corrective action plans

5.4.10.4 Waste Disposal

Suppliers shall remove waste effectively and regularly from the premises. If waste is held on site prior to disposal, Suppliers should use a separate storage area, which is suitably fly-proofed and contained to prevent potential food safety and quality hazards. Suppliers should routinely clean and sanitize disposal equipment, bins, and storage areas to avoid attracting pests. During daily, documented hygiene inspections, Suppliers should review waste management.

6 PROCESS MANAGEMENT

6.1 Purchase

All materials (raw materials, ingredients and packaging) used to manufacture The Hershey Company finished products shall come from approved Suppliers, who are selected based on their ability to meet and maintain compliance with The Hershey Company requirements.

6.1.1. Supplier Approval

The Supplier shall buy materials only from Suppliers who are approved through a documented program designed to manage their quality and food safety. The Supplier shall develop and document quality expectations, requirements and/or specifications for purchased goods that are consistent with the programs in this SQE Manual and provide them to their Suppliers. Elements of an acceptable Supplier approval program include but are not limited to the following:

- Specifications

- Risk analysis of materials provided
- Evaluation of Supplier food safety and quality programs
- Process for assessing high risk ingredients and determination of hazard control (for example – a kill step)
- Method of Supplier approval
- Audit of Supplier facility and warehouse\
- Ongoing Supplier verification activities which may include
 - Onsite audits
 - Sampling and Testing
 - Review of the Supplier's relevant food safety records
 - Review of applicable Supplier performance indicators
- Certificates of Analysis or Compliance

6.1.2. Specifications – Raw Materials, Ingredients & Packaging

Suppliers shall develop and maintain documented and current raw material, ingredient, and packaging specifications. Suppliers shall maintain a register of raw material, ingredient, and packaging specifications.

6.1.2.1. Certificates of Analysis/Guarantees

Suppliers shall maintain Certificates of Analysis, Letters of Guarantee, Continuing Pure Food Guarantees, or equivalent documents for all incoming raw materials, ingredients and food contact packaging.

6.1.2.2. Label Verification

Suppliers shall develop and maintain a documented label control program to assure correct labels are received and stored properly. All labels must comply with applicable laws, regulations, and The Hershey Company purchasing specifications and requirements. At a minimum, the program shall address:

- Label review upon receipt against regulatory approvals, where applicable, and internal specifications. Label review and verification may include accuracy of allergen statement, ingredient information, nutritional information, net quantity, kosher symbol and specific claims.
- Storage and use of labels

Suppliers shall assure labels for USDA-inspected products that are subject to sketch approval are approved by the USDA. Documentation of both sketch and generic approvals shall be maintained.

6.1.3. Material Monitoring Program

The Hershey Company requires that some specific incoming raw materials and ingredients be part of a Material Monitoring Program. This Program was designed to check for potential contaminants from the supply chain and attest that materials consistently meet The Hershey Company expectations regarding specification, chemical food safety, and compliance with all applicable Regulatory requirements for the designated country of The Hershey Company receiving Location. Materials are selected for the Program at the discretion of The Hershey Company.

Under the Program, Suppliers must submit samples representative of The Hershey Company specified materials to a designated laboratory approved by The Hershey Company for testing of the potential contaminants. This testing is in addition to tests that are required for The Hershey Company Specification compliance and may include test parameters additional to those required by Specification. Test results will be released to Suppliers and The Hershey Company, simultaneously.

The specific lot of material submitted for testing shall not be shipped to The Hershey Company locations or to contract manufacturing facilities producing The Hershey Company branded product prior to receiving the test results. Once the results confirm that the samples are acceptable, then the lot of material may be shipped.

6.1.4. Supplier Non-Conformance

Suppliers shall develop and maintain a documented nonconforming material (*i.e.*, raw materials, ingredients, packaging, finished products, and equipment) management program to assure any material that does not meet specifications is appropriately managed to prevent inadvertent use or shipment of the material.

6.1.5 Receiving

Suppliers shall develop and maintain a documented incoming materials program. The program shall address the cleanliness, integrity and security of the carrier equipment. Additionally, the program shall include the inspection and handling of the materials (raw materials, ingredients, WIP and packaging) that are transported.

6.1.6 Inventory Management

Suppliers shall develop and maintain a documented inventory management program (first-in first-out (FIFO) or first-expired-first-out (FEFO) principles) to assure the timely use of stored raw materials, ingredients, and packaging and to prevent stored raw materials, ingredients, and packaging from becoming a source of contamination. Suppliers shall document lot tracking from receipt through usage for raw materials, ingredients, and food contact packaging to maintain full traceability.

6.1.7 Contract Service Providers

Suppliers shall define and document expectations for all contract services affecting food safety. These expectations shall include a full description of the service and detail relevant training needs.

6.2 Manufacturing

6.2.1. Product Quality Specifications (Finished Product Specifications)

The Supplier shall ensure that The Hershey Company Product Quality Specifications are implemented at the manufacturing location and that appropriate plant personnel have access to the latest specifications for finished product supplied to The Hershey Company. Additionally, Suppliers shall develop and maintain a program to assure they have and comply with the most current Hershey Company specifications.

The Supplier must deliver materials that meet The Hershey Company specifications. If the Supplier anticipates that it will not be able to meet the specification, The Hershey Company Contracting or QRC Representative shall be notified immediately (see Section 1.4- Notifying The Hershey Company of Significant Events).

Licensees must provide The Hershey Company with a Product Quality Specification, which specifies product components and ingredient percentages, monitoring instructions (analytical and microbiological), weight control requirements, coding instructions, warehousing storage and shipping instructions and product and packaging appearance standards.

6.2.2 Process Flow

Suppliers shall design and organize the process flow to prevent cross-contamination and maintain a continuous flow of product through the process (e.g., separation between raw and RTE areas).

Consideration shall be given to the following:

- Sensitive areas in which foods have undergone a “kill” step, a “food safety intervention,” and/or are subject to post process handling should be separated from other processes, raw materials, or staff that handle raw materials to assure cross-contamination is prevented.
- Staff access points should be located, designed, and equipped to enable staff to don distinctive protective clothing and to practice a high standard of personal hygiene to prevent product contamination and cross-contamination.
- Product transfer points should be located and designed to avoid compromise of segregation and minimize cross-contamination.

6.2.3 Sampling, Inspection, and Analysis

Suppliers shall develop and maintain programs for sampling, inspecting, and/or analyzing raw materials, ingredients, WIP, and finished products to assure raw materials, ingredients, WIP, and finished products comply with relevant specifications and regulatory requirements and are true to label.

Suppliers shall use methods approved for the intended food type by the AOAC (current edition), current methods of

the US FDA or USDA, methods approved by The Hershey Company, or alternative methods validated as equivalent to the accepted methods noted here for all analyses, whether performed by the Supplier or a third-party laboratory. Suppliers shall document and maintain records of all inspections and analyses.

6.2.4 Packaging

Suppliers shall develop and maintain a documented packaging program to assure finished product packages and shipping containers are properly closed and sealed and protect the finished product from environmental and shipping conditions. Material in contact with the food must meet appropriate regulatory requirements for food contact materials.

Suppliers shall ensure that the label and all packaging components being used match each other and the finished product being manufactured.

6.2.5 Net Weight, Liquid Measure, and Piece Count Control Program

Suppliers shall develop and maintain a net weight, liquid measure, and/or piece count control program to assure that weight, content, and/or quantity requirements are met for all finished products manufactured for The Hershey Company. The net weight control program shall include the application of statistical process controls, routine scale verification, periodic calibration, corrective action plans and guidelines for handling non-compliant product. Suppliers shall maintain documentation of testing and methods used to assure proper weight, count, and/or quantity control.

Sampling criteria for all packaging lines shall be specified in the net weight control plan. Data must be collected routinely and across the compliance lot. Package tare weights shall be verified on an ongoing basis to assure no significant changes have occurred in package weights.

The program shall comply with all applicable laws and regulations and should follow guidelines of the most recent edition of NIST Handbook 133: Checking the Net Contents of Packaged Goods or FSIS Net Weight Labeling of Meat and Poultry Products, as applicable.

Out of compliance lots must be held for further evaluation and disposition (see Section 4.1- Hold & Release).

6.2.6 Changeovers

Suppliers shall develop and maintain a changeover program, including line clearance and code date changes. The program shall assure all printed packaging and labels are removed from line equipment at the end of the run, including partial cases and/or cases on conveyors before palletizing. Suppliers shall inspect the equipment and area and document said inspections.

6.2.7 Rework

The Supplier shall have implemented a written program to control the use of rework materials (WIP and Finished Product) in any product supplied to The Hershey Company. If rework is to be reincorporated into product as an 'in-process' step (not simply repackaging or re-casing finished product), then the conditions for use of rework must be clearly set out in the product formula and/or specifications, and equivalent local documents (e.g. Manufacturing recipe, rework matrix) with prior approval from The Hershey Company.

The conditions of use of rework must include: the type and quantity of rework that can be added to the target product, conditions of storage, reprocessing steps in which it will be added, method of addition, identification of allergens, shelf life, special handling requirements and lot number identification for traceability. If rework is identified as potentially containing allergens, it must be segregated, controlled, and incorporated only into the same and/or appropriately labeled product. Rework inventory and usage controls shall include stock rotation practices to ensure that the oldest rework is used first

Suppliers shall maintain records of all rework operations to maintain traceability. Suppliers shall include rework on the HACCP plan hazard analysis and flow chart. If rework is not used, Suppliers shall add a note to that effect in the HACCP plan.

6.3 Storage and Shipment

6.3.1 Storage

6.3.1.1 Raw materials, Ingredients, Packaging, WIP, and/or Finished Products

Suppliers shall assure that facilities used to handle or store raw materials, ingredients, packaging, WIP, and/or finished products are of suitable and appropriate design for holding and storage of such items and are maintained and secured to prevent potential contamination.

Raw materials, ingredients, packaging, WIP and finished products shall not be stored adjacent to any materials that have strong odors or adjacent to chemicals, whether hazardous or non-hazardous. Suppliers and carriers shall hold raw materials, ingredients, packaging, WIP and finished products at conditions (temperature and relative humidity) recommended by the manufacturer during all stages of storage and transportation.

Suppliers shall conduct a risk analysis when holding raw materials, ingredients, packaging, WIP, or finished products under alternative storage conditions to assure there is no risk to the integrity of those items, no contamination, and no adverse effect on food safety and quality.

6.3.1.2 Storage of Equipment and Receptacles

Suppliers shall store equipment and receptacles in rooms designed and constructed to allow for the hygienic and efficient storage of equipment and receptacles. Suppliers shall not store processing utensils or packaging in areas used to store hazardous chemicals and/or toxic substances. Equipment and pallets should not be stored outside. If outside storage cannot be avoided, Suppliers shall store materials in a sanitary manner to prevent pest harborage and develop a program to clean equipment and pallets before re-entry into the building.

6.3.1.3 Storage of Hazardous Chemicals and Toxic Substances

Suppliers shall store hazardous chemicals and toxic substances in such a way that they do not present a hazard to staff, raw materials, ingredients, packaging, WIP, finished product, product handling equipment, or areas in which product is handled, stored, or transported.

6.3.2 Shipment

6.3.2.1 Release

Suppliers shall develop and maintain a documented finished product release program. The program shall assure finished product is only released for loading/shipment by authorized employees and after all inspections and analyses are successfully completed and documented (e.g., quality holds, pre-shipment review, microbiological testing).

6.3.2.2 Loading and Shipment

Suppliers shall develop and maintain a documented loading and transport program. At a minimum, the program shall:

- Describe acceptable and unacceptable equipment and shipping container conditions (including pipes and loading/unloading equipment).
- Address temperature controlled vehicles and on-board temperature monitoring devices
- Address bulk tanker construction (stainless steel), frequency and conditions for equipment sanitation, tanker logs and cleaning certificates.
- Require documented inspections of shipping containers (e.g., trailers, tankers, trucks)
- Require proper stock rotation (i.e., product to be shipped by first expiration date)
- Include the handling of returned and/or brought back finished products

Suppliers should design loading and unloading programs to minimize unnecessary exposure to conditions and to maintain raw material, ingredient, packaging, and finished product integrity.

6.3.2.4 Seals

Suppliers shall develop and maintain a seal policy to assure no product has been tampered with or lost while under the carrier's control. Suppliers shall assure materials sent to external providers for repackaging, reprocessing, or other handling are sealed or locked appropriately during transport to and from the external provider location.

Containers shall have intact seals upon arrival at The Hershey Company or co-manufacturers and the vehicle seal number shall match the original seal number applied at the original shipping point.

Shipments that cross borders or are opened by Customs or regulatory personnel (scale personnel, police, border patrol, etc.), require a replacement seal on the door or hatch opened. In addition, the new seal number must be documented on the BOL along with the regulatory person's name and ID or badge number. The original seal should be retained by the driver and provided to Hershey's receiving personnel to compare against the BOL. If a Customs official opens an individual product container (case, drum, tote, etc.), the container shall be resealed and the driver should document that the container was opened on the BOL. (PLEASE NOTE: Truck drivers shall obtain new seals from Hershey's customs brokers or be equipped with extra seals when moving across U.S. borders). If product containers are taken by Customs, the number of missing units shall be noted on shipping records, along with the signature or badge number of agent. Extra seals may be required for shipments to Mexico.

Chemicals, whether hazardous or non-hazardous, or materials with strong odors should not be shipped on the same truck/trailer with finished products destined for The Hershey Company. While LTL shipments are not required to have a seal or continuous seal form because of the inherent nature of LTL shipments, Suppliers shall have the shipper secure trailers with a lock and the carrier shall assure that no product has been tampered with or lost while under the carrier's control.

6.4 Document Management and Control

Suppliers shall develop and maintain a document control and records retention program that effectively demonstrates the implementation of food safety and quality systems. At a minimum, the program shall:

- Identify employees responsible for monitoring, verifying, maintaining, retaining and disposing of records
- Assure records are readily accessible and securely stored to prevent damage and deterioration
- Establish record retention timeframe requirements in compliance with periods specified by applicable laws and regulations

6.5 Product Identification, Trace and Recall/Mock Recall

6.5.1 Product Identification

Suppliers shall develop and maintain a product identification program, specifying employees responsible for identifying product, including raw materials, ingredients, packaging, WIP, and finished products, during all stages of production and storage. At a minimum, the program shall assure:

- Product is clearly identifiable during all stages of receipt, production, storage, and transportation
- Finished product labels comply with customer specifications and all applicable laws and regulations
- If applicable, product labels contain the appropriate Kosher or Halal symbol of their Kosher or Halal religious authority.
- Product identification records are maintained

6.5.2 Lot Coding and Lot Size

A lot is defined as a unit of raw material, packaging, or finished product that is clearly delineable in the context of an intervention or other controls that would allow any subsequent action on the product (e.g., a recall) to be unquestionably limited to that unit. Lot definitions facilitate internal controls, provide clear boundaries around incoming raw materials and packaging, and potentially minimize the impact of a recall should a problem arise. Suppliers assign

a lot through coding, which is an identification number assigned to products indicating the batch or lot in which the product was manufactured or processed.

6.5.2.1 Coding

Suppliers shall have the ability to apply a multi-digit alphanumeric date code as well as Best By designator to all retail units that can be sold as individual units. Product traceability and distribution requirements necessitate accurate, legible date coding be applied to each unit. Multiple-line, alphabetical and numerical characters are typically utilized. Best by or Expiry statements may also be required. International coding requirements vary by country of origin and destination. Suppliers using their own date code format shall provide a code interpretation document to The Hershey Company upon request.

Co-Manufacturers and Co-Packers manufacturing finished product shall use lot codes and code dates in the required The Hershey Company format on individual retail units and shipping cases. The Hershey Company shall provide this information as part of The Hershey Company specification. Exceptions shall be pre-approved and documented.

Suppliers shall assure all raw materials, ingredients, packaging materials, WIP, and finished products have traceable lot codes that follow the item from receipt through storage and use. Blending and mixing records shall show times, quantities, and lot identification of raw materials and ingredients used.

6.5.2.2 Lot Size

No lot size should exceed 24 hours of production. Larger lot sizes must be supported by scientific/operational data and preapproved by The Hershey Company.

Suppliers shall provide an interpretation of the lot size (e.g., cleanup to cleanup, 2 hours of production, shift) to The Hershey Company.

6.5.3 Traceability and Mock Recalls

Suppliers shall develop and maintain a documented traceability program, which is capable of effectively tracing specific lots of raw materials, ingredients (including bulk ingredients), packaging, and finished products through shipping and distribution channels. At a minimum, the program shall:

- Assure finished product is traceable from the Supplier (one back) and to the customer (one up)
- Specify processes to trace raw materials, ingredients, packaging, WIP, carryover product, rework, and finished products
- Detail methods to trace finished products back to the received raw material, ingredient, and packaging lots
- Include records of product transportation and destination
- Include methods (mock recall) to validate the traceability programs at least annually. Target turnaround time to complete full traceability is 4 hours, with a maximum of 8 hours and 100% ($\pm 1\%$) effectiveness.

6.5.3.1 Emergency Contact Information

Suppliers shall provide emergency contact information allowing The Hershey Company to reach emergency contacts 24 hours a day, 7 days a week, and 365 days a year.

7 COMPLIANCES

7.1 Laboratory Compliance Criteria

- All internal & external laboratories used for analyses critical to safety, quality or legality of products need to be accredited to ISO 17025 or an equivalent national standard.
- All internal & external non-accredited laboratories will require successful completion of Hershey assessment/audit.

7.2 State and Federal Laws and Regulations

7.2.1 Regulatory Status

Suppliers shall maintain appropriate documentation to verify the regulatory status of all materials provided to The Hershey Company. Appropriate documentation may include, but is not limited to, GRAS conditions for use statement, a third-party opinion, or a Code of Federal Regulations (CFR) reference. In all cases, Suppliers shall maintain this documentation and keep it up to date during the entire time the material is provided to The Hershey Company.

Suppliers shall provide regulatory documentation certifying the legal status of materials immediately upon request by The Hershey Company and make this documentation available to The Hershey Company, third party, and regulatory auditors as needed.

7.2.2 Regulatory Compliance

Suppliers shall comply with all applicable federal, state, and local voluntary and required laws, regulatory programs, and rules.

7.2.3 Quality or Economic Adulterants and Other Chemical Hazards

Suppliers shall provide materials that are not adulterated in any way, either accidentally or intentionally, and are of high quality and implicit safety. Suppliers shall develop and maintain programs to assure the quality of materials. The program shall assure materials comply with the following:

- Global regulations and/or Codex Standards for heavy metals levels in the material
- Global regulations and/or maximum residue limits (MRLs) for pesticide residues in the material
- Tolerance limits levels for veterinary residues, hormones, and growth stimulants, where applicable.
- Mycotoxin limits, where applicable.

Suppliers shall develop and maintain an ongoing chemical management policy to assure potential chemical adulterants and reasonably anticipated chemical contaminants are monitored and are within regulatory requirements and The Hershey Company specifications. The Hershey Company reserves the right to test any materials for chemical contaminants including economic adulterants periodically.

7.2.4 Proposition 65

Suppliers providing material containing a chemical or chemicals listed by the State of California pursuant to the Health and Safety Code Section 25249.5 et. sec. (commonly called "Proposition 65") shall notify The Hershey Company in writing of the material name, listed chemical(s) involved, expected concentrations, and the warning statement the Supplier provides with the material. If the material is not expected to contain such chemicals at a concentration requiring a warning, Suppliers should provide a statement to that effect.

7.2.5 Certifications/Specialty Programs

Suppliers must comply with the requirements of the certifying body specified on the ingredient or raw material or the final Hershey Company product. Certifying organizations include, but are not limited to Kosher, Halal, Organic and Certificate of Origin. Where required by Hershey, Suppliers shall ensure conformity with legislation, religious rules or distinctions regarding certified products.

Specialty programs or label declarations require additional procedures to meet requirements for the programs such as non-GMO, Sugar Free, Gluten Free and Peanut Free.

8 CUSTOMER AND CONSUMER FOCUS

8.1 Customer and Consumer Feedback Trend Analysis

Suppliers shall develop and maintain a documented procedure for tracking, reviewing, trending and resolving consumer and/or customer complaints.

8.2 Certificates of Analysis (COA)

Ingredient and raw material Suppliers shall provide lot specific COAs to The Hershey Company plants and Co-Mfg. plants before or with delivery of the raw material or ingredient verifying the lot complies with the specification. Parameters required on the COA are specified in the Ingredient Specification under Certificate of Analysis Requirements.

A COA for finished product must provide pathogen results at a minimum. Additional analytical and microbiological test results required on the COA shall be outlined by The Hershey Company.

In addition to the required test results, the COA shall include, but is not limited to, the following:

- Manufacturer name
- Broker or distributor name, if applicable
- Manufacturing plant address
- Name of material
- The Hershey Company material or item number
- Purchase order number
- Lot number(s)
- Date of COA
- Date of manufacture
- Tests performed
- Test methods
- Unit of measure/reporting unit (*i.e.*, amount tested)
- Test results
- Name and/or signature of person certifying the lot

In addition to the above information, COAs from third party laboratories, brokers, and distributors shall include the name and address of the laboratory, broker, or distributor as well as the original Supplier's name and manufacturing facility address.

If the Product Quality Specification only contains guidelines, Suppliers shall provide a document with the above information along with the results of all tests performed as part of the Supplier's normal analysis of the lot.

9.0 CONTINUOUS IMPROVEMENT

Suppliers shall establish and document processes to improve the effectiveness of its food safety and quality management systems continually. Proper measurement shall be established to demonstrate the results. Supplier shall be proactively engaged in sharing best practices on improvement of the food safety and quality management systems.

APPENDIX A: DEFINITIONS AND ABBREVIATIONS

AOAC	Association of Official Analytical Chemists
BAM	FDA's Bacteriological Analytical Manual
Bioterrorism Act of 2002	Public Health Security and Bioterrorism Preparedness and Response Act of 2002
Calibration	Confirmation of standardization of a measurement device or system against a known reference
CAPA	Corrective Action Preventive Action -
CBP	Customs and Border Protection
CCP	Critical Control Point

CFR	Code of Federal Regulations
COA	Certificate of Analysis
Codex	Codex Alimentarius Commission
Co-Manufacturer	Production of goods by one firm, under the label or brand of another firm under a purchase order, supply agreement, or contract
C-TPAT	Customs-Trade Partnership against Terrorism
EMP	Environmental Monitoring Program
EMMP	Environmental Microbiological Monitoring Program
EPA	Environmental Protection Agency
FDA	Food and Drug Administration
Finished Product	Item purchased by Hershey from a Supplier
FSIS	Food Safety and Inspection Service
FSMA	Food Safety Modernization Act
GFSI	Global Food Safety Initiative
GMO	Genetically Modified Organisms
GMP	Good Manufacturing Practice
HACCP	Hazard analysis critical control points
High Risk Processes	A product in which there is the potential for metal contamination and where metal detection of the finished product is not possible
Hygienic Restoration	Corrective actions to maintain the hygienic condition of the processing environment and to assure the production of safe, wholesome foods, after an event that could compromise food safety (e.g., roof or overhead leaks)
Ingredient	A raw material, incidental additive, or processing aid used to manufacture a finished product
ISO	International Organization for Standardization
Legality	national, federal, state, and local regulations in the country of manufacture and intended markets
Licensee	A company that enters into a business agreement whereby it is granted a license.
Licensing	A business arrangement in which one company gives another company permission (a license) to manufacture its product and use its trademark for a specified payment (royalty).
LTL	Less than truckload
Materials	Any raw material, ingredient, packaging material, incidental additive, or processing aid that is used as part of the manufacturing process
MRL	Maximum Residue Limit
MSS	Master Sanitation Schedule
NIST Handbook 133	National Institute of Standards and Technology Handbook 133: Checking the Net Contents of Packaged Goods
NRTE	Not Ready to Eat; also, Ready to Cook (RTC)
Packaging	Packaging or containment devices that contain the finished product and/or the finished product shipping case or tray.
PCO	Pest Control Operator
Potable Water	Fit or suitable for drinking; water supplies that have been tested and determined to meet or exceed the appropriate health authority standards for drinking water
Proposition 65	Health and Safety Code Section 25249.5 et. sec.
Raw Material	An ingredient, incidental additive, or processing aid used to manufacture a finished product
Rework	Any combination of components or work-in-process that is held for later use from when it was originally combined, processed or manufactured
RTE	Ready to Eat
SQF	Safe Quality Food, a GFSI standard
SSOP	Sanitation Standard Operating Procedures
Supplier	Any company that delivers materials or services to a Hershey site also referred to as a raw material or ingredient provider, co-packer, re-packer, licensee, co-manufacturers, and other quality partners
USDA	United States Department of Agriculture
WIP	Work in Process; Work in Progress

Appendix B: Hershey's Customs-Trade Partnership against Terrorism (C-TPAT)

BUSINESS PARTNER GUIDELINES

Based on risk, applicable business partners shall commit to meet the minimum requirements for compliance with the Customs-Trade Partnership against Terrorism (C-TPAT) program regulating the flow of product from point of origin through point of distribution.

C-TPAT MINIMUM REQUIREMENTS

Security Procedures

- For those applicable business partners eligible for C-TPAT certification (carriers, ports, terminals, brokers, consolidators, etc.) the importer must have documentation (e.g., C-TPAT certificate, SVI number, etc.) indicating whether they are or are not C-TPAT certified.
- For those applicable business partners not eligible for C-TPAT certification, importers must require applicable business partners to demonstrate that they are meeting C-TPAT security criteria via written/electronic confirmation (e.g., contractual obligations; via a letter from a senior business partner officer attesting to compliance; a written statement from the business partner demonstrating their compliance with C-TPAT security criteria or an equivalent WCO accredited security program administered by a foreign customs authority; or, by completing a security questionnaire). Based upon a documented risk assessment process, applicable non-CTPAT eligible business partners must be subject to verification of compliance with C-TPAT security criteria by the importer. For more information on applicability, kindly contact the Global Security Department at +1 (717) 534 4920.
- Business partners must have a documented and verifiable process for determining risk throughout their supply chains based on their business model (i.e., volume, country of origin, routing, C-TPAT membership, potential terrorist threat via open source information, having inadequate security, past security incidents, etc.).
- Where business partners out-source or contract elements of their supply chain, such as another foreign facility, warehouse, or other elements, they must work with their business partners to ensure that pertinent security measures are in place and are adhered to throughout their supply chain.
- Business partners must develop security processes and procedures consistent with the C-TPAT security criteria to enhance the integrity of the shipment at point of origin, assembly, or manufacturing.
- Procedures must be in place to verify the physical integrity for instruments of international traffic prior to stuffing, to include the reliability of the locking mechanisms of the doors.
- At the point-of-stuffing, written procedures must be in place to properly seal and maintain the integrity of the containers, ULDs and trailers.
- An ISO 17712 high security seal must be affixed to instruments of international traffic, as applicable, entering and exiting the U.S.
- Written procedures must stipulate how seals are to be controlled and affixed to containers, ULDs, rail cars and trailers, to include procedures for seal changes and reporting compromised seals to CBP or the appropriate foreign authority.
- Instruments of international traffic must be stored in a secure area to prevent unauthorized access and/or manipulation.
- Procedures must be in place for reporting unauthorized entry into instruments of international traffic and the storage areas.

- All seals must meet or exceed the current ISO 17712 standards for high security seals.
- Procedures must be in place to ensure that all information used in the clearance of cargo is legible, complete, and accurate, while protected against the exchange, loss or introduction of erroneous information.
- Procedures must be in place to ensure that information pertaining to international shipments is reported accurately and submitted timely.
- All shortages, overages and other significant discrepancies or anomalies must be resolved and/or investigated appropriately.
- Procedures must be in place to notify CBP and/or other appropriate law enforcement agencies if illegal and/or suspicious activity is detected.
- Security measures must be in place to ensure the integrity and security of processes relevant to the transportation, handling, and storage of cargo in the supply chain.
- Cargo handling/storage facilities and storage yards for instruments of international traffic throughout the supply chain must have physical barriers and deterrents that guard against unauthorized access.
- All external and internal windows, gates and fences must be secured with locking devices.
- Gates through which vehicles and/or personnel enter or exit must be manned and/or monitored. The number of gates should be kept to the minimum necessary for proper access and safety.
- Adequate lighting must be provided inside and outside the facility including the following areas: entrances and exits, cargo handling and storage areas, fence lines and parking areas.
- The integrity of structures and fencing must be maintained by periodic inspection and repair.
- Buildings must be constructed of materials that resist unlawful entry.
- The integrity of structures must be maintained by periodic inspection and repair.
- An employee identification system must be in place for positive identification and access control purposes.
- Access controls must include the positive identification of all contractors, drivers, visitors, service providers and vendors at all points of entry.
- All visitors should be escorted and visibly display temporary identification.
- Management or security personnel must control the issuance and removal of access devices.
- Visitors must present photo identification for documentation purposes upon arrival.
- Visitors, vendors, government officials, and service providers must present photo identification for documentation purposes (i.e. visitor log) upon arrival.
- Procedures must be in place to identify, challenge and address unauthorized/unidentified persons.
- Drivers delivering or receiving cargo must be positively identified before cargo is received or released.
- Management or security personnel must control the issuance of all locks and keys.
- Processes must be in place to screen prospective employees.
- Application information, such as employment history and references must be verified prior to employment.

- Employees must be made aware of the procedures the company has in place to address and report unauthorized persons and security related incidents.
- IT security policies, procedures and standards must be in place and provided to employees in the form of training.
- Automated systems must use individually assigned accounts that require a periodic change of password.
- A system must be in place to identify the abuse of IT including improper access, tampering or the altering of business data.
- All system violators must be subject to appropriate disciplinary actions for abuse.

RECOMMENDED STANDARDS

In addition to the mandatory C-TPAT requirements outlined above, the following security measures and procedures are recommended program standards:

- Periodic reviews of business partners' processes and facilities should be conducted based on risk to maintain the security standards required by the C-TPAT Partner.
- Current or prospective business partners who have obtained a certification in a supply chain security program being administered by foreign Customs Administration should be required to indicate their status of participation to the C-TPAT Partner.
- As the foreign manufacturer is responsible for loading trailers and containers, they should work with the carrier to provide reassurance that there are effective security procedures and controls implemented at the point-of-stuffing.
- On U.S. bound shipments, foreign manufacturers should monitor that C-TPAT carriers that subcontract transportation services to other carriers use other C-TPAT approved carriers, or non-C-TPAT carriers that are meeting the C-TPAT security criteria as outlined in the business partner requirements.
- At a minimum, a documented seven-point inspection process should be in place for all containers and trailers: front wall, left side, right side, floor, ceiling/roof, inside/outside doors, outside/undercarriage.
- Only designated employees should distribute seals.
- The following ten-point inspection process is recommended for all trailers: Fifth wheel area - check natural compartment/skid plate, Exterior - front/sides, Rear - bumper/doors, Front wall, Left side, Right side, Floor, Ceiling/Roof, Inside/outside doors, Outside/Undercarriage.
- In those geographic areas where risk assessments warrant checking containers or trailers for human concealment or smuggling, such procedures should be designed to address this risk at the manufacturing facility or point-of-stuffing.
- Procedures should also be established to track the timely movement of incoming and outgoing goods.
- The cargo should be accurately described, and the weights, labels, marks and piece count indicated and verified.
- Departing cargo should be verified against purchase or delivery orders.
- Interior barriers within a cargo handling structure should be used to segregate domestic, international, high value and hazardous cargo.
- Private passenger vehicles should be prohibited from parking in or adjacent to instruments of international trade and cargo handling and storage areas.
- Alarm systems and video surveillance cameras should be utilized to monitor premises and prevent unauthorized access to cargo handling and storage areas.

- Perimeter fencing should enclose the areas around cargo handling and storage facilities.
- The number of gates should be kept to the minimum necessary for proper access and safety.
- Employees and contractors should only be given access to their area(s) of responsibility.
- Procedures for the control, issuance, removal and changing of access devices must be documented.
- Arriving packages and mail should be periodically screened before being disseminated.
- Consistent with foreign, federal, state, and local regulations, background checks and investigations should be conducted for prospective employees.
- Once employed, periodic checks and reinvestigations should be performed based on cause, and/or the sensitivity of the employee's position.
- Companies must have procedures in place to remove identification, facility, and system access for terminated employees.
- A recurring security training and threat awareness program should be established to recognize and foster awareness of the threat posed by terrorists and smugglers at each point in the supply chain. These programs should offer incentives for active employee participation.
- "Specific training should be offered in the following areas as applicable: maintaining cargo integrity, shipping and receiving, inspection of instruments of international traffic, recognizing internal conspiracies, protecting access controls, mail and package screening, as well as document and manifest review."
- Additional training should be provided to employees in the shipping and receiving areas, as well as those receiving and opening mail.

These programs should offer incentives for active employee participation.
